

# Launch code free Windows mobile applications.

- ✓ Create interactive mobile applications from Microsoft InfoPath e-forms
- ✓ Click-and-deploy applications to one mobile device or thousands
- ✓ No additional hardware, software and absolutely NO coding
- ✓ Works with any carrier and on any Windows Mobile device

## Create. Deploy. Empower.

Formotus™ software-as-a-service (SaaS) is the fastest, easiest and most affordable way to generate mobile business applications for today's Microsoft Windows Mobile® smart phones and Pocket PCs. Literally anyone can create and deploy custom applications in minutes with a few simple clicks, opening up a world of mobile business on your favorite devices and carriers.

### With the Formotus SaaS you can:

- Generate interactive mobile applications from Microsoft Office InfoPath® eforms
- Click-and-deploy those applications to one mobile phone or thousands
- Pay a simple monthly fee per device and deploy an unlimited number of FormoApps™ eforms to that device
- Use any carrier and any Windows Mobile device
- Get secure over-the-air (OTA) deployment of business applications, with no additional hardware or software purchases, and absolutely no coding

Today's smart mobile devices have computing power making them ideal business companions. They're rugged, inexpensive, small and useable everywhere. In fact, if you could just get easy access to all your business data, they would be perfect for a mobile workforce. Well, now you can. With Formotus SaaS, mobile business applications are literally a click away. No business process reinvention, no expensive training, no additional hardware or software, and no need to shuffle paper on the road ever again.

### Create mobile applications using Microsoft Office

If you know how to use any Microsoft Office application, you're ready to get down to business. Formotus technology republishes Microsoft Office InfoPath eforms as FormoApps eforms mobile-ready applications. Click-and-deploy files to a mobile device. No need to rely on an IT department; Formotus SaaS puts the power to mobilize business data where it needs to be: with the people that use it.

### Deploy mobile solutions without device hassles

Whether you're looking to build an application for yourself or mobilise a workforce of thousands, Formotus SaaS is the answer. It creates the application once and deploys securely over-the-air to any Windows Mobile device. Different devices, different screen sizes, different carriers? No problem. The "intelligent application" automatically adapts to each device, and the software is completely carrier independent. Yet with Formotus SaaS, you still retain administrative control for absolute peace of mind.

### A Library of eforms at your finger tips

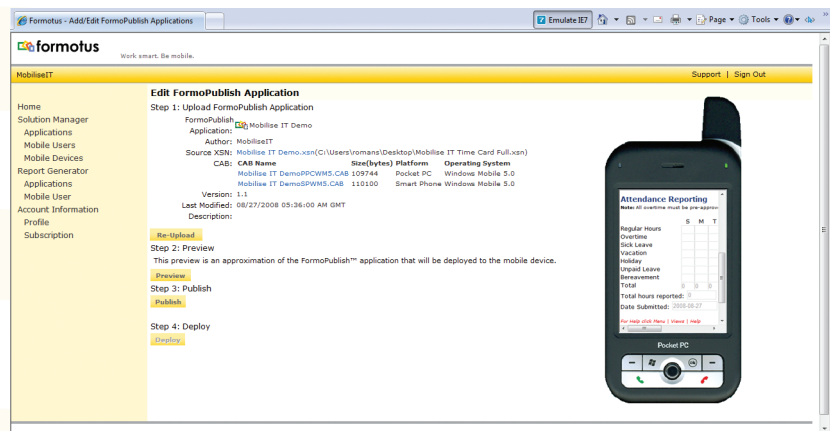

Easily build, manage and search your Formotus eforms library, accessible only by you and your mobile team. The eforms library lets you track all of the FormoApps eforms that you deploy throughout your business; see what version of FormoApps eform is on which device.

Download ready-to-use templates from the Formotus Web site into your library. It's simple to customise these eforms for your business.

### Mobile anytime, anywhere business access using existing infrastructure

Mobile employees can interact with their data online or offline for uninterrupted workflow. Collected data is entered and stored on the mobile device itself and automatically synced with existing enterprise backend data systems for fast, seamless data integration. No additional hardware or software is required.

Even better: Formotus SaaS is the only mobile application solution that works out of the box with Microsoft SharePoint® Server 2007.

### Subscription or Appliance

Formotus provides a SaaS (Software as a Service) for fast and simple generation of mobile applications. But if you'd rather install the software, then Formotus Enterprise Edition provides everything to host the service onsite.

### Professional and Enterprise Editions offer:

- Customer-specific eforms libraries
- Form management with search capability
- Primary and secondary administration
- Ready-to-use templates
- Offline data validation
- Reporting
- Installation behind customer firewall (Enterprise Edition only)

### Formotus advantages:

- Works on any Windows Mobile device
- Works out-of-the-box with Microsoft SharePoint Server 2007
- Leverages familiar Microsoft Office environment
- No added hardware or software costs
- Compatible with all carriers
- Supports simple and multi-dimensional mobile eforms
- Works online and offline
- Leverages radio buttons, drop down menus and other mobile-friendly data entry mechanisms
- Secure over-the-air deployment
