Microsoft Direct Push Mobile Email

Microsoft Direct Push from Mobilise IT is a scalable and cost-effective wireless email solution that utilises your existing investment in Exchange rather than purchasing additional third party solutions. Microsoft Push Email enables mobile professionals to easily stay connected to their Microsoft® Outlook® and Office® information while on the go. Mobilise IT's Mail To Go service is designed specifically for companies with Microsoft Exchange Server 2003 and above interested in deploying wireless email to Windows Mobile devices.

Microsoft Direct Push Mobile Email

Microsoft Direct Push sends email, calendar, contacts and tasks directly to a mobile professional's Pocket PC or SmartPhone as soon as items arrive/change on the server; ensuring users are always in the know. Mobile Professionals can respond to email and manage documents efficiently with the same familiarity as their desktop experience.

The Mail To Go Advantage

Mobilise IT's Mail To Go takes the complexity and risk out of deploying mobile direct push by providing a professional service to configure your Exchange. Mobilise IT will configure devices, provide training and supporting documentation. We provide the level of service business customers have come to expect from the market leader for corporate wireless email.

Businesses that have deployed Microsoft Exchange Server 2007 can have end users take advantage of an even richer end-user experience while delivering more comprehensive IT visibility and manageability with Windows Mobile 6 devices*:

- Send and receive rich HTML-formatted corporate email.
- Synchronize your calendar and contacts with Outlook on your PC or directly with your Exchange Server over the network.
- Remote search of your Exchange mailbox for messages not on your device.
- Remote search your company's global address list for contacts.
- Send meeting requests, track attendance, receive detailed responses to your meeting requests and set, or update, out-of-office notification.
- New Security Features: Enhanced PIN policies, self-service remote wipe, encrypt external storage cards using AES and keep your data secure during transmission using 3DES.

*Microsoft Office Outlook Mobile availability and functionality varies by device and by Windows Mobile operating system. Available programs, features, and functionality vary by device, Windows Mobile operating system version and version of Exchange Server used.

The Mail To Go solution is designed for corporate customers who have Exchange 2003 and above and require a fast and efficient service to get up and running with Mobile Mail & Microsoft Direct Push for Exchange.

To ensure our customers have a seamless experience with the service moving forward, Mail To Go provides each customer with their own custom setup file that can be loaded on to future devices; this software solution called "MTG Configurator" will automatically install and configure push mail on these devices.

Mail To Go" is a product of Mobilise IT Pty Ltd — a Microsoft Gold Certified Partner.

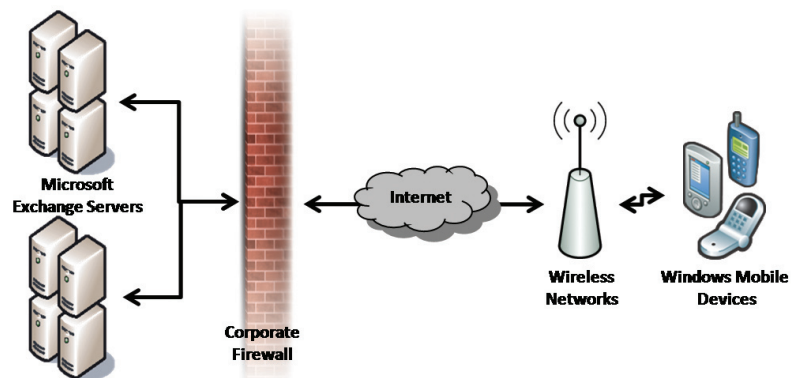

Term and conditions apply. For full product description and terms & conditions please visit: www.mailtogo.com.au. Devices and telecommunication provider data plan costs are not included. Innovative Direct Push Architecture

Mail To Go is not just great for mobile professionals, it's great for the IT department. Direct Push operates without third party middleware, client access licenses (CALs) or new device software, this all results in simplified management, lower upfront investment and the opportunity for a rapid return on investment. The service includes a number of security features including remote policy enforcement, remote device wipe and password enforcement to protect sensitive corporate data.
